The Problem

Accessibility to Healthcare

In rural Africa, the majority live in remote areas with limited access to healthcare services.

45% less likely to have a clinic in the community.

70% less likely to have medical supplies and medication.

People in rural Africa face the most significant healthcare gaps.

Chronic Lack of Healthcare Services

Many in rural Africa face a chronic lack of healthcare services and professionals.

Only 2 doctors available for every 10,000 people.

60-70% of people in rural Africa do not have adequate healthcare.

Users have pointed out the enduring pain point of long distances and lack of healthcare service accessibility.

The Solution

Telemedicine and Point of Care

Rural Africa's healthcare gaps can be addressed through telemedicine and point of care solutions.

The TechVoyagers and Virtual Health Co. have designed and deployed a virtual consultation platform for remote healthcare.

Consultation

Diagnosis and Treatment
Follow-up and Care
Improvement in Health Service

Impact on Health
Service
End-User Experience

Research and Development

8 of 10 people

Begun to utilize the telehealth platform for consultations and care.

30%

Reduction in cost and time to access healthcare service.

Women

More than men have provided positive feedback for the telehealth platform.

45%

Preferred the telehealth platform to in-person consultation.
